Highlights

Wood Group Consulting Services provides individuals that hold years of relevant experience for Exploration and Production projects and operations across the United States.

It is no secret that finding experienced skill sets in today's onshore energy market is a difficult task. Our network of highly qualified consultants bring the specific skill levels and knowledge that our customers' help ensure that their goals are met in a safe and cost effective manner.

We can provide expertise to construction projects, such as drill site construction all the way through to work over and recompletion work. If we do not have the specific skill set readily available that is needed, we have the capability to source through several different options to find the right fit for the work at hand.

We specialize in complementing our customers' operations with qualified industry experience to make sure that project and productions goals are met within specified time parameters.

Case Study

Wood Group client was ramping up for increased drilling construction activity in the Eagle Ford shale. Our client required experienced consultants with leadership skills and a strong commitment to safety. Job duties required overseeing and insuring the work of third party contractors. Construction of pad sites, roads, pipeline, facilities construction, drilling and completions. With skilled consultants in high demand we were able to source, screen candidates and then involve the client to help select the right person for the job. We were able to keep up with demand as activity increased. By doing this we decreased turnover by matching the right personnel for the job and also maintain a safety culture that is critical in a fast paced operating environment.

Client was needed to do inventory walk downs for over 10,000 wells in the Four Corners area. Wood Group mobilized a team of skilled consultants with oilfield production equipment experience to walk down the locations and create an itemized list. By doing this the client saved both time and money by using skilled people that were knowledgeable. The quality of data gathered exceeded the expectations of the client and helped create a strong basis for their new maintenance program that was beginning to be developed.
