

Argentina Offices

With offices in Buenos Aires, Mendoza and Catamarca, has been delivering projects for a full range of engineering and design services for downstream & chemicals, mining and automation industries.

Multidisciplinary

With a total of close to a 220 people for process, safety, mechanical, piping, civil, structural, electrical, and instrumentation engineering disciplines, as well as resources to execute procurement and construction management services, our capabilities are supported by a group of strong Project Management, Project Controls and Project Services professionals.

Multi sectorial

The office has executed projects for the oil & gas, petrochemicals & chemicals, mining, and general manufacturing sectors

Whole life cycle

Wood Argentina personnel has experience developing several types of projects, including:

- conceptualization, basic and detailed engineering,
- site surveys and assessments,
- Supply change management, including purchasing, expediting, logistics, and inspection
- HSSE and Quality evaluation and support, including permitting
- construction management
- commissioning and start-up services

These services can be provided under flexible contractual approaches, such as reimbursable or lump sum

Relevant Project Profiles:

Livent Salar del Hombre Muerto New Lithium Plant

FEED Engineering (Thailand office) followed by EPFs modular units. Cm activities executed by Buenos Aires team.

Raizen Energy (Shell SCAPSA) Clean Fuels Project

FEED Engineering (Milan office) followed by EPFs on Hydrogen and Hydrotreaters modular units

Pan American Energy Delayed Coker Unit

Basic Engineering (Houston office) followed by EPCm.

Pan American Energy Vaca Muerta Gas Development Project

Conceptual Engineering
