Experience is the Difference

Wood Group's proven experience in design, cost control, schedule and safety is the cornerstone of our successful long-term client relationships. From conceptualization through construction and start-up, our multi-disciplinary team of engineers and professionals collaborate with our clients to develop and implement effective solutions that help them gain a competitive advantage in the market.

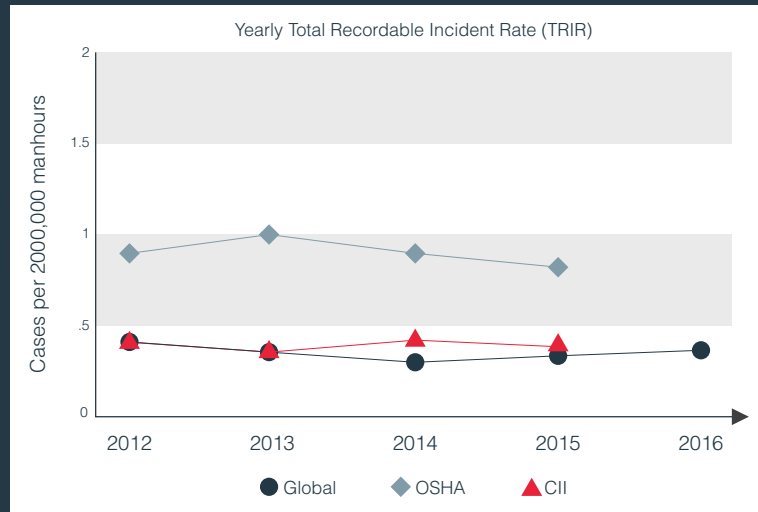

Industries We Serve

Our project teams have hands-on engineering expertise to take a grassroot project from concept through startup. Industries we serve include:

- Aerospace
- Automotive
- Chemicals
- Engineered materials
- Industrial
- Manufacturing
- Pulp and paper

Best in Class Safety

As one of our core values, safety is of the highest importance in all activities in which we are engaged. Our safety culture is based on education and accountability starting with senior leadership and filtering to every level within the organization.

Flexible Project Delivery

We have proven experience in executing a variety of types and sizes of capital projects. We do not take a "one size fits all" approach to Project Management/Construction Management execution. We have the flexibility to tailor execution plans to fit the unique drivers and objectives for each client and each project, while utilizing a standard set of PM/CM procedures and systems that are common across all projects and would be integrated into an overall EPCM delivery. This "right size" approach allows us to efficiently plan and execute small to large projects with predictable results for safety, quality, cost and schedule.

We Know the Project

Wood Group's offering includes full service PACTUM. We have experienced support teams and the latest in modeling software, project management tools and other resources to ensure that our clients receive the most timely and cost effective deliverables.

Our capabilities include:

- Project and program management
- Concept development
- Project development
- Competitive assessment
- New process development and commercialization
- Front-end engineering
- Detailed engineering
- Estimating
- Materials management
- Procurement
- Construction management
- QA/QC and inspection
- Process safety management
- Professional staffing services
- Cost & schedule sanagement
- Manual development and training
- Start-up and commissioning

We leverage our previous work experience and methods, as well as lessons learned from working successfully with previous clients, to be a valuable part of your team.

Regional Offices Solve Specific Needs

We continue to establish and staff offices with experienced teams to execute projects unique to specific regions. From grassroots EPCM projects across North America, facility expansions and modernizations along the Gulf Coast and West Coast, to the largest capital project ever to be built in the state of South Carolina, we are positioned to meet your needs. We open domestic and international field locations as the need arises. Each is fully supported by on-site teams and 'virtual' support, including the latest in project tools and shared resources of all disciplines.

Value Improvement Practices

We utilize Value Improvement Practices (VIP) to help ensure the quality and success of your project. Our specialists implement VIP during the projects FEL 1-3 stages where the highest opportunity exists to positively influence project outcome.

Implementing Best Practices

We are experienced in all areas of best practices, including those recommended by the Construction Industry Institute (CII). These best practices are designed to improve performance in project cost, schedule, operability, safety, reliability, and client satisfaction. Our projects repeatedly score highly on IPA benchmarking, a key indication of our commitment to excellence in execution.

Professional Services Solutions

Our Professional Services Group provides clients with on-site engineering and professional support services. Managed by seasoned professionals, the group partners with client companies to provide a cost-effective means to satisfy fluctuating staffing demands. We can provide engineers, designers, managers, administrative, project controls, and field service positions. We maintain an extensive personnel database and automated tracking system to identify and place candidates.
