

## Milan office

Established as a corporate entity in Milan in 1957, provides a full range of design, engineering, procurement, construction and project management services for the process industries.

Headquartered in Milan, it provides a full range of services from studies, FEED, project management, EPC execution and on-going asset support for the oil and gas, refining, chemicals, power, environmental protection and pharmaceutical sectors.

Over the years, it has developed particular in-depth expertise in the realisation of industrial plants for power generation from different fossil fuel and renewable sources, as well as for gasification-based plants for energy and chemicals production.

The office also has proven specialist skills in the design, construction and validation of plants in all the life sciences sectors: primary bulk API, biotech, formulation, fill/finishing and R&D plants, offering state-of-the-art capabilities for any size or type of projects.

The company is a world-class designer and supplier of process heaters and waste heat recovery boilers, serving the refinery, petrochemical and power industries.

We have a specialist environmental group which is a leader both in consultancy and in the design and execution of plants for the environmental protection, with particular expertise in soil and groundwater remediation, and the treatment of primary and effluent water.

The Milan headquarters offer excellent facilities in a modern setting. The office is located in two main buildings, approximately 10,000 m<sup>2</sup> for offices and 15,000 m<sup>2</sup> encompassing garden/parking and other supporting facilities. Other facilities, connected to main buildings through covered path ways, include: canteen, auditorium, entrance hall, general services, post office and copy centre. The floors are organised to offer both open space and individual offices with a large number of meeting rooms, video-conference and model review facilities available to support project execution.

### Facilities:

- Our offices around the world are fitted out to a high standard, with all of the facilities required to successfully execute engineering work, whilst maintaining a safe and secure working environment
- Currently employs over 800 personnel
- Around 10,000 m<sup>2</sup> of high standard, flexible office layout
- Restricted area access
- Located in Corsico, outskirts of Milan
- Within 20 minutes from Milan central station and 30 minutes from Linate and Malpensa airports
- Private shuttle bus connecting the office to the underground, (MM1 - Red Line 1)
- Excellent road network

### Capabilities:

- ISO 9001, 14001 and 45001 accreditation
- Green Building Council (GBC) associate
- Fully fledged execution capabilities
- Since its establishment in 1957, it has designed and built over 800 plants and process heaters in the refinery, chemicals and petrochemicals, environmental, power generation and life sciences fields
