

NEXUS

IC-Inspection

Inspection data management
+ Wood expertise

A powerful inspection and anomaly management system for maintaining and optimising your asset

NEXUS IC is a flexible inspection and anomaly management system that can be tailored to meet the specific needs of your asset or organisation.

Automatically capture info from a variety of real-time inputs

Dashboards for trend visualisation and easy access to data when needed

Improved accuracy and detail and access to historical data for inspectors

Detect and flag potential anomalies

Mobile compatibility to access and collaborate in the field

Planning and scheduling tools to automate workpack generation

On-the-job updates to scopes without interruption

Subscription process to manage remote offline inspection data gathering

Simple and easy workpack progress reporting

Fully integrates into vessel inspection spreads and controls inspection from a single UI

Wood offers a unique combination of software expertise and operational experience. Our integrity management and inspection experts use NEXUS IC to manage our duty holder assets. This, in combination with a successful history of managing and migrating COABIS or similar databases, allows us to fully support a seamless transition to a new software platform.

- Software support (Flexible installations, extensive user training)
- Engineering support (Integrity engineering and inspection SMEs)
- Implementation support (Programme and change management)
- Integration and alignment with other systems to avoid data duplication
- Flexible and scalable commercial arrangements to suit your requirements
